

Introduction

The S_Entry is the crucial link in any high-quality perimeter. Where the S_Guard marks the boundary, the S_Entry ensures controlled passage. This modular security gate has been specifically developed for high-security locations and government agencies seeking an indestructible solution for the access of vehicles, equipment and personnel.

Key Features

High-security access

A robust design that integrates seamlessly with the S_Guard, ensuring there are no weak points in your security line.

Modular & mobile

Thanks to its well-thought-out design, the S_Entry can be deployed in a flash for both temporary government projects and permanent installations.

Technical Specifications

Characteristics	Value
Height	280 cm
Weight	400 kg
Material	S235 steel
Finishing	Thermally galvanized (80 µm), in accordance with ISO standards
Assembly	Lifting eyes, forklift slots, compatible with S_Guard
Application	Rental & Sales

Areas of application

The S_Entry has been developed for environments where standard fencing falls short. Find out how we deploy this indestructible system across various sectors.

Events

Essential for the strict and efficient management of large crowds.

Demonstrations

Maximum physical resistance and protection against vandalism and disturbances.

Construction & Installations

The impenetrable anti-climb and anti-tunneling fencing guarantees safety at strategic work sites and vulnerable facilities where unauthorised access poses an immediate danger.

Buildings

High-quality perimeter protection for vulnerable properties and large-scale renovation projects.

Benefits at a glance

- Seamless integration with the S_Guard perimeter
- Quick to install thanks to the modular STASCH entry system
- Can be combined with electronic access control
- Low-maintenance thanks to hot-dip galvanizing
- Withstands intensive rental use
- Available for both rental and sale
