

Introduction

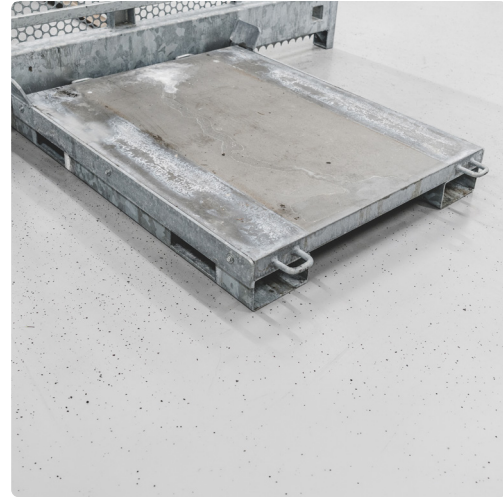

When standard security is not enough, the S_Guard offers the solution. This modular security system has been specifically developed for high-security locations and government agencies that make no compromises on security. Thanks to its unique design featuring impenetrable sheet metal, the S_Guard creates a barrier that is both physically and psychologically insurmountable.

Key Features

Impenetrable sheet metal

Instead of wire mesh, we use robust, 3mm perforated sheet metal. This makes the fencing anti-climb and prevents the use of concrete cutters.

Anti-tunneling construction

The reinforced bottom rail fits seamlessly to the ground, making it impossible to dig under or crawl through.

Sabotage-resistant coupling

Each panel is fitted with an integrated steel coupling chain. This ensures an unbroken perimeter that cannot be opened by unauthorised persons.

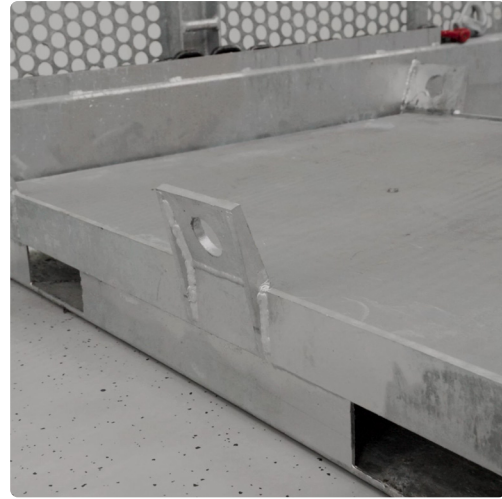

Maximum durability

Manufactured from high-quality S235 steel and hot-dip galvanised (80µm). This guarantees a long service life, even with intensive use in the hire sector.

Quickly movable with pump truck

Our specially developed hand truck makes it possible to move the fencing quickly, safely, and entirely independently in emergency situations.

4 heavy-duty lifting eyes

Also for stacking

Rails for a coupling chain

Heavy-duty loop eyes for coupling chains

Additional forklift slots
For narrow passageways (1.5 m)

Extra-point kick
For fan separation

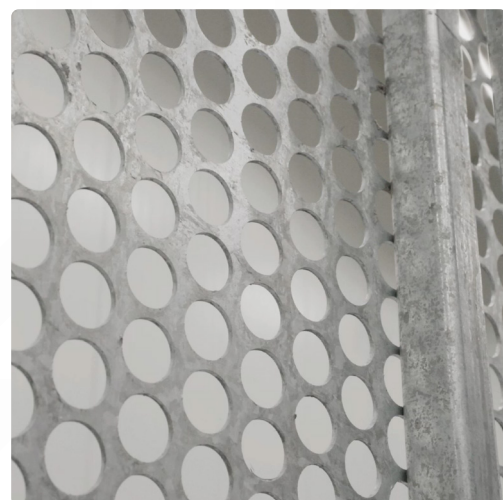

**Safety latch for
3 height settings**

Spring Pins
For quick verification

Anti-slip pins
Optional

3mm perforated sheet

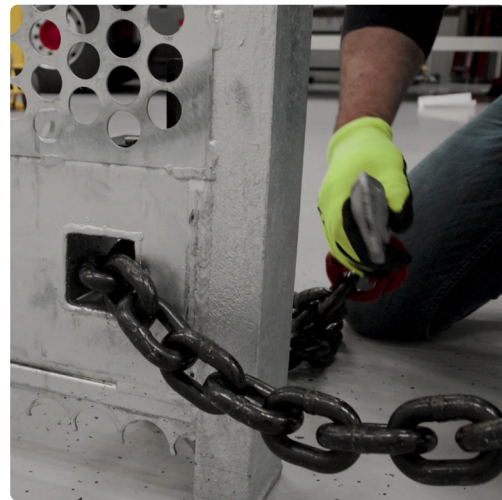

**Logo can be customized
(optional)**

Extension section
2mm expanded metal sheet with a serrated
edge

Spiked Comb
for Anti-Tunneling

**Heavy-duty coupling chain
with quick-release clasp**
Optional

Technical Specifications

Characteristics	Value
Height	200 to 300 cm
Weight	920 kg
Material	S235 steel
Finishing	Thermally galvanized (80 µm), in accordance with ISO standards
Safety Profile	Anti-climb & anti-tunneling
Link	Integrated steel coupling chain
Application	Rental & Sales

Areas of application

The S_Guard has been developed for environments where standard fencing falls short. Discover how we deploy this indestructible system across various sectors.

Events

Essential for the strict and efficient management of large crowds.

Demonstrations

Maximum physical resistance and protection against vandalism and disturbances

Construction & Installations

The impenetrable anti-climb and anti-tunneling fencing guarantees safety at strategic work sites and vulnerable facilities where unauthorised access poses an immediate danger.

Buildings

High-quality perimeter protection for vulnerable properties and large-scale renovation projects.

Benefits at a glance

- Fully enclosed perimeter. No sight lines, no access
- Anti-climb and anti-tunneling features included as standard
- Modular and quick to assemble
- Low-maintenance thanks to hot-dip galvanizing
- Available for rent and for sale
