

Introduction

Maximum control over your visitor flows starts with the S_Turn. This mobile, full-height turnstile is specifically designed for locations where controlled access and security are priorities. Thanks to its robust design and quick deployment, the S_Turn provides an impenetrable barrier that integrates seamlessly into any temporary or permanent perimeter.

Key Features

Controlled access

The full-height construction ensures that people can only enter or leave the premises one at a time and following authorisation.

Plug-and-Play installation

Thanks to its mobile configuration and modular design, the S_Turn can be installed in a flash and is immediately operational.

Technical Specifications

Characteristics	Value
Height	280 cm
Weight	450 kg
Material	S235 steel
Finishing	Thermally galvanized (80 µm), in accordance with ISO standards
Assembly	Lifting eyes, forklift slots, connectable with S_Guard
Application	Rental & Sales

Areas of application

The S_Turn has been developed for environments where standard fencing falls short. Find out how we deploy this indestructible system across various sectors.

Events

Essential for the strict and efficient management of large crowds.

Demonstrations

Maximum physical resistance and protection against vandalism and disturbances.

Construction & Installations

The impenetrable anti-climb and anti-tunneling fencing guarantees safety at strategic work sites and vulnerable facilities where unauthorised access poses an immediate danger.

Buildings

High-quality perimeter protection for vulnerable properties and large-scale renovation projects.

Benefits at a glance

- One-at-a-time access. Tailgating not permitted
- Quick to install thanks to lifting eyes and modular design
- Seamless integration with S_Guard perimeter
- Low-maintenance thanks to hot-dip galvanization
- Available for rent and for sale
- Optionally expandable with signage
